Report Date: 18-May-2013

Report ID: 4691-5213-0844-9120 Verify report at https://www.vgl.ucdavis.

Cat: MOTOKO 2013#2 Reg: PENDING

DOB: **02/25/2013** *Breed*: **MC** *Sex*: **M** *Microchip*:**AVID*073*091*810**

Sire: NW GC TAC-N-TAC RYUU Reg: MC1664M2-119945
Dam: CH MAGGIELANES MOTOKO OF TAC-N-TAC Reg: MC1215F2-118961

Maine Coon HCM Test Result

N/N

Result Codes:

N/N	Normal.
N/HCMmc	One copy of the A31P mutation is present. Cat is 1.8 times more likely to develop HCM than cats without the mutation.
HCMmc/HCM	Two copies of the A31P mutation are present. Cat is 18 times more likely to develop HCM than cats without the mutation.

This test only detects the A31P mutation associated with HCM in Maine Coon cats and outcrosses as described by Meurs et al. 2005. The A31P mutation is not the sole cause of HCM in Maine Coons. The other causes are not known at this time. For additional information regarding the status of A31P mutation and HCM in Maine Coons, see www.vgl.ucdavis.edu/services/cat/MaineCoonHCM.php
